	3) Apply Data Services, such as reformatting, requestor conversion, subsetting (not A), etc.	
Jane pulls her data via ftp		
Jane acknowledges completion	4) At a DAAC-specified interval, the software issues a "confirm to Delete" message to the operator to reclaim staging space that was used to fulfill request(s) that have been pulled.	<i>Respond to a "Confirm to Delete" message.</i>
		The option of manual deletion confirmation can be turned off by DAM. Then staging space
		reclamation becomes automatic per DAAC policy.
